

AVT Reliability® offer a full range of products and services for asset management professionals including: vibration, oil analysis, thermography and ultrasound as well as training.

These services are used as part of their asset integrity, performance monitoring and maintenance management programs or for one off consultation. AVT Reliability® can act as an on-site maintenance provider, consultant or one-off trouble shooter assuring all its customers are safe in the hands of some of the world's leading experts in reliability.

The latest addition to their range of Machine Sentry® vibration sensors, is MSF-1. The tri-axis vibration and temperature sensor is the most advanced, user friendly, wireless condition monitoring sensor available. MSF-1 can be paired to any Android tablet or smartphone using standard Bluetooth®, providing safe and efficient data collection from up to 50m away. Making MSF-1 the perfect condition monitoring tool for hard to reach assets.
