

PEMAC ASSETS – Offering Enhanced Form Design & Contractor Management

The impact of the COVID-19 Pandemic is effecting all of us – both in personal and work life. While we all adjust to new working practices and care for those close to us, PEMAC have been implementing a full plan to ensure our business and the protection of our client's businesses is prioritised. We recognise that our product is critical to Production success and are working to ensure this is maintained.

PEMAC Assets is comfortably placed as a leading CMMS in UK & Ireland. While operating the basics expected of a CMMS, **PEMAC Assets** houses a number of integrated products including a full Health & Safety suite with Contractor Management & Permits. A Paperless Forms product is also integrated across the CMMS with the ability to stand alone in departments outside of the main engineering and maintenance functions.

From speaking with clients over the last few weeks and understanding the new or heightened challenges they are facing, PEMAC has been able to support with existing functionality or features already existing in our product.

PAPERLESS FORMS SOFTWARE –

This software allows you to remove paper and the requirement for hard signatures from all processes - maintaining approval chains while many staff are working from home. Forms can be designed to suit your business requirements, plus as they are available on a web interface and mobile there are no concerns with staff access while working from home.

Many of our clients have increased their use of this software and created new Site access forms tracking people as they enter their premises and recording relevant details particularly relevant to COVID 19 and contact tracing.

CONTRACTOR MANAGEMENT & PERMITS –

Most of us are working with tighter controls now and it is imperative to track who is on site, their full contact details and when and where they operated. PEMAC Assets Contractor Management module streamlines this process and links the information directly to the CMMS and Work Orders.

These are the main challenges we are helping with right now. We're also seeing customers benefit by using our **Resource Planners**, and **Stock Forecasting** functionality enhancing planning as delivery times are lengthened. **Predictive Maintenance** is also key now helping to support resource planning and production targets – **PEMAC Assets** contains live reporting bringing preventive or predictive maintenance plans to reality.

Contact PEMAC if you want to discuss any of the above. Talk us through your current maintenance challenges and we will aim to develop a solution to support you. Although we would love to meet face to face, all demos, trainings and implementations can be delivered remotely. **PEMAC Assets** is fully supported by an e-learning training programme so rolling the product out across your business (potentially remotely) is not an issue.
