

## **Grundfos Optimisation Services - Which assessment is right for you?**

Pumps are at the heart of your facilities. Day in and day out, pumps make your business run. But they come at a price. Not so much to purchase, but in the daily operation of the pump. In fact, 85% of the total costs of your pumps relate to the energy used to run the pumps. And there is money to be saved. An Energy Check of your pumps provides a solid foundation for saving 30-50% on the operational costs of your pumps. Any installation with old, over-sized, inefficient or unsuitable pumps is likely to hide this kind of savings – and the Energy Check helps you discover the potential. At Grundfos, we offer a number of different energy efficiency assessments: Energy Check, Energy Check Advanced, Pump Audit and Thermo Dynamic Testing.

If you want a quick assessment of the typical savings that can be made by upgrading to high efficiency pumps on one or more of your pumps, then the Grundfos Energy Check is a good place to start. With an advanced energy check we can monitor the energy and performance characteristics of every pump in your facility at once, this can often provide wider benefits than just energy monitoring, often highlighting problems with valve performance and incorrectly specified pumps.

If you like to find out more on how we can help you, or if you like to book an energy check, please get in contact and visit [www.grundfos.co.uk](http://www.grundfos.co.uk) .
