

dp Doors & Shutters Ltd

Industrial doors

dp Doors & Shutters Ltd supplies, installs, maintains and repairs a range of industrial doors, security shutters and grilles. Its collection of doors includes insulated sectional overhead, single-skin, fire and insulated roller shutters, steel hinged personnel doors, fire doors and high speed action doors. Before work begins, a full site survey is carried out at no extra cost.

Introduction: Based in Sheffield, dp Doors & Shutters operates from an 8000 ft² factory and supplies and installs a wide range of industrial doors, shutters and grilles across the UK. Clients range from high street shops to international airports and blue chip manufacturing companies. On-site work is by in-house staff or by members of a nationwide portfolio of labour-only subcontractors who can attend to repairs on the same day as call-out. The company employs its own Health & Safety consultant who liaises with clients to confirm requirements for on-site working and ensures that all in-house engineers are trained and equipped to meet all relevant H.&S. Standards and safe systems of work. Risk Assessments/Method Statements are prepared to ensure that work is carried out safely and successfully. All company engineers are trained in the use of hydraulic access platforms and the erection of mobile scaffold towers and have completed Passport to Safety courses.

The company is currently engaged in training all staff to the City and Guilds Specialist Installations Door Systems NVQ Level 2; this will eventually supersede CSCS cards. **Authority:** All power operated doors are fully compliant with current legislation and carry a CE mark. The company is a BS EN ISO 9001 registered company and is a full member of the Doors & Hardware Federation (DHF). **Sustainability:** The company operates an environmental policy placing a big emphasis on recycling and is currently working to ISO 14001.

DESCRIPTION

Roller shutter door operation options are:
manual - by haul chain and self-coiling, or electrically - by three or single phase motors.
Security shutters have a slimline finish and provide a compact shutter for small and medium size apertures. Applications are for domestic, commercial and retail properties and where aesthetic requirements are paramount. Crossguard® security grilles are open view and horizontally sliding and may be fitted to windows and doors, usually internally. They have a two-point slam lock which is secure, unobtrusive and easy to operate.

® Registered Trademark

Roller shutter doors are offered single-skin or insulated. Finishes are galvanized, standard Plastisol or powder-coated to standard RAL or BS colours. Electrical operation is by direct drive thus eliminating the need for internal springs which add unnecessary weight to the shutter and create extra possibilities of component failure. Folding shutter doors are strong and robust with proportional movement controlled by a pantograph system. Units are top-hung, single or double format, stacking neatly to the side of the opening. Doors may be arranged around obtrusive fittings such as cranes. Fire roller shutter doors are designed to close automatically under a controlled descent after the signal from the fire alarm. They offer 1, 2 or 4 hour resistance. High speed fast action fabric doors are designed for high traffic with either external or internal use. They can be operated from a variety of options, such as induction loops, movement detectors and fork truck mounted transmitters. After opening, the doors will close automatically after a timed delay. Photo Cell safety beams and electronic safe edges complement the automatic closing and ensure the doors are fully compliant with legislation relating to safety features.

Sectional overhead doors are for large external openings and comprise 600 mm deep, horizontally fixed, insulated panels which travel vertically above the clear opening. Insulated roller shutter doors are for large external openings where headroom and space above the opening is restricted. The door comprises 100 mm deep double-skin lath sections with a foam infill. Draught insulation is provided by twin brush seals within the door guides.

Guarantees: All doors are offered with a year's warranty and customers are reminded that there is a legal requirement to carry out regular maintenance on all power operated doors, with full service records kept.

SERVICES

Services to specifiers include:

- New door installation
- Repair for all door types
- Preventative maintenance, including rapid response to any downtime onsite due to impact damage or system failure and provision of a printed maintenance manual which provides a record of all visits and all work done.

REFERENCES

A company brochure and individual product leaflets are available. Recent projects include:

- 8 m wide, electrically operated, steel sliding folding shutter to the loading bay at the base of the Swiss RE building, London
- 10 m wide, high speed door at the billet shop of the Outokumpu stainless steel fabrication facility
