ROTRONIC manufactures an extensive range of precision measurement devices that can be relied upon. Sensor types are available for any application including ATEX rated dust and gas hazardous environments.

For continuous environmental monitoring, with all data available securely anywhere and on any device, the validated **Rotronic Monitoring System (RMS)** can provide the solution. Additional parameters can be monitored with easy sensor integration e.g. oxygen. RMS is fully modular and can easily be extended as monitoring requirements change.

Calibration Accessories

Rotronic manufactures a wide range of calibration accessories for end users including the HygroGen2 portable temperature and humidity calibrator for use with any manufacturer's probes. The XL version has even greater chamber capacity making it ideal for higher volume calibration work and for loggers and larger devices. HygroGen2 is specified by laboratories worldwide; it is in a class of its own. Our ever-popular traceable Humidity Standards are available in a wide range of %RH values with a shelf life exceeding 10 years. Rotronic UK has UKAS accreditation for temperature, humidity and dew point laboratory calibration. We are proud to have probably the lowest measurement uncertainties of any commercial laboratory in Northern Europe.

About Rotronic

Rotronic is a Swiss based manufacturer of precision measuring instrumentation with a global network of distributors. Our research and development department continually improve product performance particularly for RMS devices and sensors used in harsh and challenging environments such as hydrogen peroxide fumigation and at high temperature/humidity levels.

Our products are specified across industry – from pharmaceutical and food companies to the brick industry, together with museums & galleries, research organisations and test houses. Experienced engineers are always available to provide technical support for Rotronic products and their use in any application.

Rotronic is a company within the PST Group of process sensing technology companies. We can now offer our customers an even wider range of parameters including oxygen measurement at the highest level of precision.
