

Earth leakage is just one parameter.

With the 18th Edition's increased emphasis on earth leakage and the associated problems, electricians are being encouraged to get a dedicated clamp-meter. However, Metrel, the provider of innovative test solutions, think this is a wasted opportunity, that's why their earth leakage clamp meter, MD 9272, includes a range of power quality functions too.

With Appendix 17 of the 18th Edition, introducing energy efficiency and its measurements, such as W (Real Power), VAR (Reactive Power), VA (Apparent Power), Power Factor and Harmonic Distortion, you don't have to go out and buy yet another tester. The Metrel earth leakage clamp meter can measure all these parameters for the cost of an ordinary clamp meter.

While the MD 9272 is measuring leakage current, it can be giving you so much more information at the same time and for no more cost

Like other clamp meters of this quality, the Metrel earth leakage clamp meter, offers true RMS readings, maximum, minimum and data hold functions as the ability to measure currents as high as 100 A.
