

Busch presents new series of Dolphin liquid ring vacuum pumps

Busch Vacuum Pumps and Systems has now launched an entirely new series of liquid ring vacuum pumps. The new Dolphin LM/LT vacuum pumps have been completely redesigned but are based on proven liquid ring vacuum technology. With these new vacuum pumps, Busch has been able to optimize an existing product that has become an established part of many industrial processes, resulting in the development of extremely powerful, yet energy-efficient vacuum generators.

Dolphin LM models are single-stage vacuum pumps for the rough vacuum range from atmospheric pressure to 130 hPa (mbar) ultimate pressure. Dolphin LT models are available in two-stage versions and cover the vacuum range from atmospheric pressure to 33 hPa (mbar). A total of 13 sizes are available so that a precisely coordinated solution can be found for any process. Dolphin LM/LT vacuum pumps have a modular design and integrated flow channels. This makes them extremely compact and eliminates the need for base frames. The IE3 energy-saving motor is directly flange-mounted. The new seal concept with mechanical shaft seals, made of Viton or PFC rubber depending on the pumping medium, ensures a long life cycle. The standard material for the impeller is stainless steel. A stainless steel version of the housing is available as an option.

Water or a fluid suitable for the process medium is normally used as the operating fluid. Ethylene glycol, mineral oils or organic solutions can also be used, as well as the fluids already used in the process. Dolphin LM/LT liquid ring vacuum pumps can be operated in simple circulatory systems, in open or closed liquid cycles. Their high vapour and particle tolerance makes the extremely robust vacuum generators exceptionally well-suited for removal/extraction of wet gases or vapours. They are thus predestined for use in processing technology, chemical and pharmaceutical processes, food technology applications, oil production and processing, plastic processing, wood impregnation and drying processes, and many other industrial applications. Dolphin LM/LT vacuum pumps are available in sizes with pumping speeds of 80 to 900 cubic metres per hour. Versions for operation in potentially explosive environments are available in different ATEX-compliant versions and temperature classes.

Busch will present the new Dolphin LM/LT liquid ring vacuum pumps atACHEMA in hall 8.0, stand no. B27.

About Busch:

Busch Vacuum Pumps and Systems is one of the world's largest producers of vacuum pumps, vacuum systems, blowers and compressors.

Its extensive product portfolio comprises solutions for vacuum and overpressure applications in all industries, including the chemical, semiconductor, medical technology, plastics, and food sectors. It also covers the design and construction of customized vacuum systems, as well as a global service network.

The Busch group is a family-owned company and is still managed by the Busch family. Busch Vacuum Pumps and Systems has 3,000 employees in more than 60 companies in over 40 countries worldwide. Busch is headquartered in Maulburg, in southwest Germany. This is the location of Busch SE headquarters, as well as the German production facility and German sales company. In addition to Maulburg, Busch also has its own production plants in Switzerland, the UK, Czech Republic, Korea and the USA.

History:

Busch Vacuum Pumps and Systems was founded by Dr.-Ing. Karl Busch and his wife Ayhan Busch in 1963. Dr.-Ing. Karl Busch developed the "Huckepack", which was the first vacuum pump that could be used for vacuum packaging of foodstuffs. The follow-up product, the compact "R 5" rotary vane vacuum pump, revolutionized food packaging. A further milestone represented the development of the "COBRA" screw vacuum pump. In 1971 the international expansion of the Busch group started with the founding of a sales company in the UK. The first production plant outside Germany was established in the USA in 1979.
