

NEWS RELEASE

WATCHING YOUR WEIGHT!

FREE WEBINAR FROM HBM LOOKS AT THE BENEFITS OF CHECKWEIGHING WITH LOAD CELLS.

HBM – a market leader in the field of test and measurement – has announced the date for its latest free webinar on '[Checkweighing with Load Cells](#)', which will take place on October 5th 2017 at 9am (GMT).

Checkweighing is most commonly used to control completeness of products, assemblies or kits. This process describes weighing a certain object against a preset target.

Following a general introduction on how to achieve optimum quality control via checkweighing, this webinar will discuss the advantages of checkweighing with load cells based on strain gauge technology.

Participants will also be given the opportunity to watch a live demonstration on how the HBM checkweighing algorithm, signal analysis, and on-the-fly filter simulation, work.

Presented by Thomas Langer, Product Manager of HBM Digital Weighing Technology, this informative seminar has been designed to fit in with the challenging time constraints which can often make attending relevant training courses difficult.

This webinar, which normally takes a maximum of one hour, can be easily accessed at a later date or simply used as a refresher course. As an added benefit, all registered attendees will receive a link to the webinar, via email, after the presentation.

For further information, contact HBM on +44 (0) 20 8515 6000 or via email: info@uk.hbm.co.uk or visit the HBM website at www.hbm.com
