

Sulzer promotes reduced downtime at P&AM show

At this year's Plant and Asset Management show, which will be held at the NEC, Birmingham from April 12th - 14th, Sulzer will be showcasing repair techniques for large rotating equipment that reduce downtime. In addition to offering the opportunity to meet Sulzer engineering experts at their stand, Sulzer will also be delivering a seminar on the Wednesday afternoon detailing the advantages of one-stop maintenance and repair of rotating equipment.

The Plant and Asset Management Show is a biennial event which attracted over 13,000 delegates from over 25 countries in 2014. In addition to nearly 50 exhibition stands, the seminar programme allows delegates the opportunity to gather valuable advice on a broad range of subjects from a variety of speakers.

This year, Sulzer will exhibit for the first time, highlighting the repair services for mechanical plant, motors, generators and pumps that can improve reliability and reduce the Total Cost of Ownership (TCO). Details of the complete range of services from component supply to turnkey refurbishment projects will be available from Sulzer's experienced staff on Stand P422.

With a worldwide network of service centres, Sulzer is a leading service provider for all brands of rotating equipment including pumps, compressors, turbines, generators and electric motors. These are supported by design, manufacturing and engineering centres that can offer tailored and innovative solutions for all industrial sectors.

For more information visit the Sulzer staff on Stand P422
