<u>Hamersham and Twin Oaks Computing: An Exciting Partnership is Born</u>

Hamersham Ltd, the UK's provider of world class machine software control solutions, has just signed an agreement to become the UK and European Distributor for Twin Oaks Computing, Inc, the U.S. based providers of CoreDX DDS and quality software solutions worldwide.

This collaboration positions Hamersham as the sole provider of CoreDX DDS Data Distribution Service (DDS) products and services in the UK and Europe. Enhancing the company's current offerings, partnering with Twin Oaks Computing means Hamersham can now offer a complete DDS solution, including licensing, technical support, port development, system integration, and maintenance.

Nick Pridham, founder of Hamersham, says *"This is a fabulous opportunity for Hamersham. Twin Oaks Computing has an enviable reputation in the DDS market globally and this partnership greatly complements our current offerings. It allows us to present a more comprehensive, high band width networking solution to our existing customers in the mobile off highway machinery sector, as well as open up many additional opportunities to work in diverse industries and markets. Although still in its infancy, we are already seeing the benefits of the partnership and the advantages DDS can bring to businesses in Europe."*

Nina Tucker, Vice President Sales and Marketing, from Twin Oaks Computing agrees: *"We are pleased and excited to welcome Hamersham to our global team. Hamersham brings valuable DDS and software integration experience and a highly experienced technical support team to the UK and European markets. The Hamersham values and ethics are closely aligned with our own, and I am confident this will pave the way for a long and successful partnership."*

Today's mission and business critical systems depend on robust, secure, real time data communications for monitoring, control, and data analytics. DDS is the proven data communications standard for the Industrial Internet, reducing time, risk, and cost to businesses in mobile, industrial, medical, and rail environments.
