NEWS RELEASE

TLV EURO ENGINEERING ANNOUNCES EXPANSION OF UK OPERATIONS

Cheltenham, UK – Tuesday, 19 January 2021 – In a move that will present fewer Brexit-related issues for its customers, increase its stock holding and strengthen ties with its parent company in Japan, steam solutions specialist TLV Euro Engineering has expanded its UK operations with the opening of a new 6,000 square feet warehousing facility in Cheltenham.

Commenting for TLV Euro Engineering, general manager Michael Povey says: “As we neared the end of 2020 it became clear that, whatever the outcome of a trade agreement between the UK and European Union, our customers would benefit more from the trade agreement reached between the UK and Japan.

“Until recently, we had partnered with our sister company in Germany but knew very early on that any trade agreement with the EU was going to present issues. However, we weren’t willing for these issues to lead to increased prices for our customers so, as 31st December 2020 approached and we learned more about the proposed import/export processes our plant in Germany would have to implement, we put our post-Brexit plan into action and forged ahead with plans to import stock directly from Japan.”

TLV Euro Engineering has now formally entered into trading partnership with its parent company and manufacturing facility in Japan, a move that will see the company increase its stock holding of steam system solutions in the UK from £150,000 to £800,000 worth of stock.

The investment in its UK operations and near 450% increase in stock meant the company had to worked tirelessly throughout the recent Christmas shutdown to ensure its new facility – which offers a six-fold increase in capacity on its previous warehouse – was fully stocked, operational and despatching orders by the start of business in the New Year.

The new facility, which is located at Furlong Business Park in Bishops Cleeve, Cheltenham, is now fully-operational and holds over 1,000 steam system parts available ex-stock and, in many cases, for next-day delivery.
