Panduit Launch WrapID™ Automated Labelling System for Wired Identification

Panduit introduces the compact semi-automatic, “PLA-100/E” WrapID automatic labelling system offering significant increases in productivity for medium to high-volume label applications.

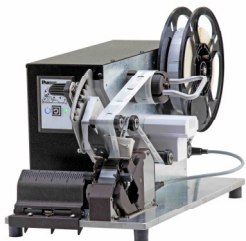

Users can benefit from faster turnaround times of up to 3X faster than traditional manual installation and 2X faster than leading competing systems. The winding head of the compact system is easy to reach, so that labels can be attached to the line or cable within 12.7 mm of the connectors or terminals. In addition, the label head has a modular design and can be replaced easily and inexpensively during maintenance, and the label position can be realigned at the push of a button.

Improved ergonomics reduce operator fatigue and minimize the risk of repetitive motion injuries. Panduit's analysis between manual and automated systems shows that the WrapID automated labeling system saves approximately 170 labor hours per 100,000 labels. Compared to competitor automated systems, Panduit's solution saves approximately 80 man-hours per 100,000 labels against competitor's systems.

Today, valid cable labeling is an essential part of the documentation in switch cabinet construction, network technology or in the data center for easier commissioning and maintenance. The new WrapID system, together with Panduit's high-quality labels and label printers, is designed for large-scale cable harness production.

Whether for cable assembly, switch cabinet or machine builders or network technicians, the WrapID labelling machine, delivers labels which are precisely positioned, and optimally attached ensuring increased quality in reduced timeframes.

About Panduit

For more than 60 years, Panduit has been the world's leading provider of innovative solutions in the field of physical and electrical infrastructure for data centers, industrial and building automation and related services. Headquartered in Tinley

Park, IL, USA, with offices in 112 locations worldwide, Panduit stands for quality and innovative technologies. The family-owned company with more than 5,000 qualified employees generates sales in the billion Euro range worldwide. Panduit owes its outstanding market position to the constant striving for innovation and the untiring commitment of its employees. The global player invests above average in research and development, in first-class production, in the best possible support of its sales channels and in excellent customer service. This, combined with a strong partner network, is the prerequisite for comprehensive support, sustainability, and solid corporate growth in the networked world of today and tomorrow.
