MULTI-REASONS TO CHOOSE C.K.'s NEW MULTITOOL ACCESSORIES

C.K Tools, the hand tools specialist, is extending its trade favourite multitool accessories range with the launch of three new products.

With oscillating tools a staple for electricians who work with a variety of materials, C.K Tools' new multitool accessories include a Carbide Blade (T0877), Scraper (T0878) and Box Cutter (T0880), ensuring versatility and precision for any occasion.

The Multitool Carbide Blade (T0877) is designed for heavy duty jobs and cutting through tough metals such as steel pipework or conduit, as well as damaged fixings such as screws, nails and bolts. The reinforced blade provides great durability and supports the requirement for precise cutting in what can often be tight working areas.

For removing unwanted surface material, the Multitool Scraper (T0878) takes less effort and makes less damage than a manual job and its stainless-steel blade provides strength and an easy-clean surface from waste residue. The Multitool Box Cutter (T0880) provides users with quick, clean and precise cutting of one and two-gang sockets in plasterboard, wood and plastic. Its unique cutting guide also allows for more efficient secondary cuts.

Not only do the accessories offer great versatility they also have a universal quick-change fitment to facilitate use with most brands of multitool.

For over 100 years, C.K has been at the forefront of hand tool manufacturing and develops its products in collaboration with trade professionals, ensuring they are engineered for long-life performance and safety.
