

## Switch On and Start Welding (Geomembrane)

Equip yourself with the right machines to tackle your greatest challenges.

Leister's new thermoplastic membrane welders are designed to be so easy to operate that both novices and professionals can produce a perfect weld seam with little introduction or practice. The TWINNY T5 and T7 are digitally controlled with easy-to-operate displays and intuitive user controls. The TWINNY T7 comes equipped with the Leister Quality System (LQS), GPS and WiFi, allowing all welding parameters to be easily stored, shared and recalled, making it possible to carry out flawless and repeatable welds from the start. Simply download the myLeister app to your smartphone or tablet, add your TWINNY T7 and away you go.

If you want to weld thick or thin geomembranes, from 0.5 – 2.5 mm or 20-100 mils, easily and safely, the versatile TWINNY T5 or TWINNY T7 will be your go-to automatic welders. They have been practically designed to deal with rough or uneven terrain, with extra-large travel casters that provide more ground clearance and reduce stress for these types of welding situations. With ergonomically designed, cleverly positioned handles, the new TWINNY welders are well-balanced, making them easier to guide, move and transport.

With more powerful drives that consists of a motor, gearbox and reinforced transmission chains, the TWINNY T5 and T7 are durable and easy to service, with low maintenance costs. Furthermore, the welding speeds have been substantially increased, reaching 8 metres per minute, thanks to the powerful blower and significantly higher heating output. The hot air flow ensures dry and clean welds while the powerful air jet removes dust and sand, and moisture evaporates in the high temperatures. As a result, by using the TWINNY T5 or the TWINNY T7 you will enjoy consistent, quality welds with speeds up to twice as fast as their predecessor the TWINNY T.

If maintaining high performance welding with ultimate comfort is essential for you, then the well-rounded TWINNY T7 is recommended. If you're looking for an easy-to-operate welding machine and don't need any modern digital functions, then the TWINNY T5 is the perfect solution for you.

Developed by Leister - the leading name in plastic welding applications, the TWINNY T5 and TWINNY T7 are supplied to the UK by Welwyn Tool Group. Welwyn supply the full range of Leister plastic welding and industrial process heat equipment and offers highly competent technical support by their team of dedicated engineers.

For further information and technical advice for equipment in this field, please contact Welwyn Tool Group on 0800 856 0057, email them on [info@welwyntoolgroup.com](mailto:info@welwyntoolgroup.com), or visit their website [www.welwyntoolgroup.com](http://www.welwyntoolgroup.com).
