FOR IMMEDIATE RELEASE

Cable certifier power doubled with launch of new LanTEK IV-S

TREND Networks has launched LanTEK IV-S, its fastest, most powerful and easy to use copper and fibre cable certifier to date.

“LanTEK IV-S has double the power of the original LanTEK IV model, which was a trailblazer when it was first introduced in 2019,” says Tim Widdershoven, Marketing Director for TREND Networks.

“LanTEK IV-S builds on the exceptional functionality and reliability of the original model, with a new dual core processor, new 3.0 operating system software and twice as much memory storage, enabling 5,000 tests to be saved.”

Testing links with LanTEK IV-S can now be done 16% more quickly and to help manage the test data, the best-in-class TREND AnyWARE Cloud system has also received a major speed improvement powered by Microsoft® Azure. Plus, it now includes a unique, intuitive folder structure (similar to that found on a PC) that makes organising tests much easier between the project, building, floor, room, and rack.

“We know that it is important to cable installers to work smarter, not harder, so the dependable LanTEK IV-S is designed to optimise speed and efficiency,” says Tim. “We’re providing the fastest Cloud system for certification, giving customers the quickest way to upload tests and create reports, alongside a more responsive touchscreen user interface that is 42% quicker, and faster operating system software.”

To maximise value, the LanTEK IV-S cable certifier will also be available to purchase as part of cost-saving bundles. These offer extras such as the Sapphire Care Plan, FiberTEK IV adapters and cables, FiberMASTER video inspection probe and FiberMASTER OTDR, with total savings of up to 20%. A choice of six bundles is available.

Existing LanTEK IV users that have a Sapphire Care Plan can upgrade to the new LanTEK IV-S at no extra cost. Trade-in discounts are also available for those with LanTEK II and LanTEK III certifier models. In addition, those with a LanTEK IV can install the latest software update for free to benefit from a faster user experience.

As part of the TREND Networks Depend On Us Philosophy, LanTEK IV-S is also covered by a lifetime support promise. In the event that the product is no longer supported, a 30% discount is available on a new model.

“With LanTEK IV, we brought a new standard to the industry, helping boost productivity and accuracy with one of the fastest Cat 6A test times in the world,” says Tim. “With the next generation, LanTEK IV-S, we’ve built on this core functionality with refinements that offer the power and speed that we know busy installers need.”

Order LanTEK IV-S now from TREND Networks distributors or direct from the online shop at www.trend-networks.com.

About TREND Networks

With decades of experience, the close-knit team at TREND Networks (Formerly IDEAL Networks) understands the challenges that data cable installers, network technicians and systems integrators face each day, around the world. That’s why we support our customers with an extensive range of innovative data cable and network testing equipment that provides fast, accurate results in all circumstances – even the most difficult ones.

Our deeply engrained ‘Depend On Us’ philosophy ensures that our customers know we will always provide the performance and support they need.

Headquartered in the UK, with international offices and an experienced global team, we manufacture and supply a range of industry leading and dependable test equipment that makes our customers’ jobs simpler, including cable certifiers, data cable testers, cable verifiers, cable qualifiers, fibre cable testers, active network testers, network transmission testers, PoE testers, CCTV testers, bandwidth testers, industrial ethernet testers, and more.

Through technical support, training, service, calibration, and advice, as well as resources to help educate users, our customers can be reassured that TREND Networks will help them to become ever-more productive.
