

Press Release

Six days instead of six months delivery

Motor customers in the UK appreciate Menzel Elektromotoren's fast delivery capability. Two of them recently contacted the German family-run company after experiencing motor failures, which meant that the water supply to 30,000 households was threatened and production in a cement plant was halted. After delivery times of only six and ten days, respectively, both the pump and the cement mill could be restarted in the shortest imaginable time. Faced with unexpected downtime due to equipment failures, customers often cannot afford to wait for a motor manufactured from scratch – standard delivery times in higher output ranges start at six months. Menzel has proven a strong partner in an emergency, quickly configuring suitable motor systems for a wide range of high-output applications from its large, diverse stock of motors, cooling units and ancillary equipment – such as the current two jobs for British customers. The squirrel-cage pump motor has a nominal output of 1380kW operating at 3300V. The slip-ring motor for a cement mill delivers 2000kW at 11kV. Its special features are increased ingress protection rated IP55 and a closed cooling system with a top-mounted air-to-air heat exchanger (cooling type IC 611), ideal for dusty environments and large temperature fluctuations.

Large industrial motors from stock and quickly tailored to order:

About Menzel Elektromotoren

Based in Berlin, Menzel Elektromotoren GmbH has been manufacturing and distributing electric motors since 1927. The medium-sized company specializes in the delivery of large electric motors, including special models, within the shortest possible time. The product range comprises high and low voltage motors, DC motors, transformers, and frequency inverters. Services include motor production and short-term adaptation of stocked motors to application-specific requirements. In order to ensure fast deliveries to the customer at all times, the company maintains a very extensive inventory including more than 20,000 motors with a maximum performance of up to 15,000 kW. Qualified engineering, experienced staff, and state-of-the-art production and testing facilities help Menzel provide excellent reliability. Menzel operates subsidiaries in the UK, France, Italy, Spain, and Sweden, and cooperates with numerous partners worldwide.

Menzel is currently building a new motor plant in Hennigsdorf, near Berlin. The future headquarters will go into operation in early 2024.
