

ARI-Armaturen set to unveil innovative product developments at ACHEMA

If you are going to the ACHEMA exhibition in Frankfurt this year, be sure to visit the ARI-Armaturen stand (Hall 8.0, stand B45) where they will be revealing an exciting array of advanced technology and product developments.

A new variable, compact control valve (*STEVI® Vario*) will be making its debut at the show along with a fully lugged version of the *ZETRIX®* premium process valve (available up to DN 600) and an array of products for medium pressure including bellows sealed, stop valves (gland seal), check valves and strainers from DN 65 – DN 100.

With over 60 years of valve experience, launching *CONLIFT®* (mechanical condensate pump) was a first for ARI-Armaturen and the *CONA® P* now adds to the collection – a new pump trap with an innovative design combining a pump and steam trap- all to be revealed at ACHEMA!
