# **INDUSTRIA BEARINGS SECURES EXCLUSIVE GMN DISTRIBUTORSHIP FOR UK**

**Uxbridge based Industria Bearings & Transmissions has confirmed it has been appointed as exclusive distributors of GMN high precision products for the UK.**

Products include the brand new GMN CF seal, which has been designed specifically for use on spindle bearings, the full range of non-contact seals – including labyrinth and gap seals, as well as sprag type clutches in both freewheel and ball bearing formats.

Roy Thomason, Managing Director for Industria Bearings & Transmissions, said: “We have been awarded this prestigious distributorship due to our reputation for being the ‘distributors’ distributor’, which is due to our widely recognised expertise with all types of bearing projects and this in turn is testament to our highly knowledgeable team and their hard work.

“We have been working with GMN for a number of years now and this latest development will no doubt further strengthen our relationship. We look forward to working with GMN to champion their products in the UK and to developing what we anticipate will be a highly successful and mutually beneficial arrangement.”

Jens Igelhaut of GMN said: “It is important for our company to have strong representation from a technically skilled and knowledgeable, trusted partner, not only from our side but from our UK customers’ standpoint.

“Knowing and working with the Industria Bearings team for many years has established this high level of trusted relationship and we have every confidence that GMN products are going to be very well represented in the all important British bearings market moving forward.”
