Wieland's new HMI ECO touch panels - essential for machines and systems

Wieland's new HMI ECO touch panels have become essential for machines and systems in their use for visualisation, operation, and diagnostics. When used in conjunction with the samos[®] PRO safety controller they offer complete automation, including seamless data exchange between the visualisation software hmiPLAN and the planning software samos[®] PLAN6. The unit offers flexible communication and seamless integration with over 40 different PLC and device manufacturers, including convenient data exchange of export and import functions.

This robust IP66 display is easily programmed via an Ethernet or USB client, while commissioning is quick having only one project file, which is easily converted to suit each screen size. Designed for industrial environments, HMI ECO touch panels have an extended temperature range from -10 °C to 60 °C on standard panels with -20 °C to 60 °C supplied on request.

Wieland's HMI ECO touch panels also offer VNC (virtual network computing) functionality and comfortable operation via smartphones and tablets, further offering superb flexibility in the control and monitoring of machines, while enabling authentication of users to provide security.

As part of Wieland's "MyLogo" campaign a customised design with your own logo and individual colour scheme is available.

Ends

Please note new address for Wieland as of 14th June 2019 is:

Wieland Electric Ltd.
Ash House, Tanshire Park
Shackleford Road,
Elstead
Surrey
GU8 6LB
