

Fulton 'Restart' Package Offers Peace of Mind

Fulton is well aware of the effect that COVID-19 has had on customers and the wider industry and appreciates that many steam boilers have been shut down during this period. So, as operations are ready to resume, businesses need to make sure boilers and steam systems are ready too and meet the Health & Safety* requirements and operational demands required of its processes.

Before restarting, Fulton's advises that a boiler/system assessment is undertaken to ensure processes restart without risk to personnel or the business in general. And to assist, they are offering a Restarting Workplace Pressure Systems Safely package consisting of:

- Pre-start assessment (potential issues are identified and rectification planned in with re-commissioning – where possible)
- Re-commissioning of the steam boiler and water treatment
- Follow up verification visit to fine tune and confirm boiler run condition (if requested)

This service is available for all fuel-fired and electric steam boilers, including those of other manufacturers.

* The HSE's recommendations on restarting workplace pressure systems safely during the coronavirus outbreak can be found here: <http://ow.ly/mhBv50AwVXb>
