

## **OFFLINE MOBILE CMMS**

**PEMAC** has advanced their mobile offering, and now **PEMAC Assets CMMS** is available on mobile in online environments plus offline. Internet connection may not always be available, particularly if working outside or in some larger manufacturing plants, which can cause issues if midway through a Job or Work Order and trying to record details.

**PEMAC Assets CMMS** will now prompt users when internet connection is dropping with the option to switch to 'Offline Mode'. The current job in progress will go offline for that user to continue working and once back online all data will automatically synchronise.

**PEMAC Assets** normal CMMS features on mobile continue to function when offline including the Asset records, Work Order tasks, Calibrations and integrated camera features.
