### **BRUNEL INVESTS IN CUTTING EDGE TECHNOLOGY TO OFFER THE ENGINEERING INDUSTRY A RAPID ONE STOP ENGRAVING SERVICE**

Brunel Engraving has made a major investment in state of the art technology in order to significantly increase its efficiency and output, providing a rapid one stop service to the engineering industry.

The leading specialist engraver, reputedly one of the most progressive operators in the precision engraving and processing of metal and plastic components, has quadrupled its laser engraving capacity with the installation of two state of the art laser engraving machines at its production facility near Bristol.

In addition, a dedicated 1.5kw fibre laser profiling machine which is able to cut metals such as stainless steel up to 3mm thick, will allow Brunel to cut profiles, shaped labels and control panels from pre-etched and engraved sheets.

Brunel has further invested in another rotary engraving machine to expand its production in rotary engraving work. This brings the company's total rotary machines to seven, the largest of which has a maximum bed capacity of 610mm x 1220mm.

The latest laser cutting and profiling equipment together with Brunel's laser and rotary engraving, chemical etching and digital print operations, will enable the company to offer the engineering industry a faster response time, improved quality control and more competitive pricing.

"We have invested in additional high tech engraving equipment and extended our production capability to allow our industrial customers to take advantage of a complete one stop service", said Martyn Wright, managing director and founder of Brunel Engraving.

“We engrave and manufacture to high precision standards to a wide spectrum of industries, providing bespoke services at cost effective prices. We will continue to invest in the future to remain at the forefront of the engraving industry and, most importantly, to provide our customers with a perfect working partnership”.

Established over 30 years ago, Brunel Engraving is a pioneering engraving specialist which provides a complete service to a whole host of industries. The company leads the way in technical innovation. Brunel has ISO9001 accreditation and its highly skilled team of professional engravers is trained to the highest standards in the UK.
