

Idhammar Monitor: customisable, flexible real-time reporting

Idhammar Monitor is designed to present key performance information to any browser on any PC or display, any time.

Maintenance teams will benefit from real-time reporting of asset performance by being actively alerted to issues as they arise, speeding up repair processes and shorten lead times.

Your priorities, your screen

Real-time Customisable Screen Alerts

Continuously refresh data, to provide an *instant* indication on the status and priority of work orders.

Screen designs based on Red, Amber, Green reporting.

Configurable and Customisable Reports

Present multiple report data sets, through a single access point.

Views can be tailored to filter data specifically to each individual user's requirement.

Improving maintenance teams productivity

Present any data, from any database on your network.

Idhammar Monitor can display outstanding breakdowns, incomplete safety tasks, MTTF, current OEE events, lines stopped, recorded inspection failures
