## Introducing a new range of Industrial Process Chillers

The UltraChill range of process chillers go from 0.89 to 160 kW. These compact, energy efficient units are suitable for a wide range of process cooling applications and industry sectors, including automotive, engineering, food and drinks production, pharmaceutical, plastics, print and packaging, medical and scientific.

The UltraChill range are available in varying formats and come with a wide range of standard options enabling easy adaption to best suit individual processes and applications. All units come with a fully corrosion resistant, nonferrous coolant circuit, including powerful circulating pump and high efficiency, copper brazed, stainless steel plate heat exchanger. A package of safety interlocks help protect both the chiller and process, whilst an advanced digital controller with diagnostics and alarms, provide a comprehensive user interface.

Highly competitive, the UltraChill range are available on short lead times and supported nationwide by a fully trained network of engineers, ensuring ongoing, quick and reliable support.

*Thermal Exchange Ltd is an ISO 9001 Company specialising in providing process cooling and thermal management systems for industrial, medical and scientific applications. Based in Leicester since 1982, Thermal Exchange both manufacture and distribute a wide range of standard temperature control equipment and also welcome enquiries for special design requirements.*
