

Compact Industrial Oil Skimmer

Oil Spill Products Limited have added a new compact oil skimmer to their range of weir skimmers. Specifically designed for industrial applications, the Osprey 150 mini skimmer is manufactured from robust 316 stainless steel. Ideally suited for use in sumps, tanks and confined areas, it will fit through a 610mm manway. The central weir can be adjusted to suit recovery rate, with mooring eyes on each float to easily fix in a specific location. Available to buy or hire. Oil Spill Products can supply a full recovery system comprising skimmer, pump and oil water separator.
