

Rotronic Presents Their New Environmental Monitoring System (RMS)

ROTRONIC the Swiss-based manufacturer of precision Humidity, Temperature, Low Dew Point, CO2 air quality, Pressure and Airflow measurement devices, has developed its new Rotronic Monitoring System (RMS). The advanced monitoring system checks, documents and visualises all required measurements in one system. The data can be retrieved from anywhere, at any time by PC, Mac, tablet or smartphone. The system offers the highest level of performance, flexibility and versatility yet is easy to set up and operate.

The new Rotronic Monitoring system (RMS) provides one complete, flexible and yet simple monitoring solution instead of many fragmented and complex systems working in isolation. The RMS software stores all recorded measurements securely in a system that the user can access at any time, data can be retrieved in any form and integrated into 3rd party systems. The RMS data loggers transmit the measured values to the software via wireless or LAN communication.

RMS is Highly Versatile

The modular system is suitable for use in production, manufacturing processes and, storage facilities throughout industries of all types. It can be used during the transportation of valuable products that are sensitive to variations in humidity and temperature levels. Data loggers record all data continuously with temperature, humidity and other parameters. Third-party devices and existing systems can be integrated easily. The system sends error messages and alerts by voice call, e-mail or SMS text messages as well as smartphone apps.

For online version: Rotronic has prepared a short video explaining the Rotronic Monitoring System (RMS) – *click here to view*

RMS has a Wide Reach and Data is Secure

Wherever the user is located, access to the real-time data is guaranteed. Control and monitoring is possible at any time via PC, Mac, tablet or smartphone. Thanks to the server database and the server software, high availability of the data is guaranteed and data security ensured by https protocols – regardless of the location.

Full product information is available on the website **www.rotronic.co.uk**
Contact **ROTRONIC** to discuss your application or project requiring secure monitoring.
