

Meeting customers' needs with on-time material supply

A stock of more than 16,000 standard stainless steel items at the Sandvik distribution centre in Halesowen, West Midlands, help service on-demand and scheduled supply requirements for stainless steel and advanced alloy materials to customers throughout the UK and worldwide.

The distribution centre stocks and distributes an extensive range of stainless steel from seamless tube and pipe to welded tube and pipe and coiled tube, seamless hydraulic and instrumentation tubing, heat exchanger, boiler, high precision, high temperature and fertiliser tubing, solid round bar, hollow bar and billets. It also holds one of the largest stocks of fittings, flanges and elbows, such as butt weld fittings, flanges, forged fittings and threaded fittings in a wide specification and size range. This gives it the ability to supply complete system packages for the most demanding projects and all materials are supplied with mill test certificates.

To supplement its local stock availability, the UK distribution centre is able to draw on Sandvik's global resources with manufacturing and distribution centres worldwide and stock replenishment on a daily basis.
