PRESS RELEASE 22.02.2021

New electric desk TED from Treston suits industrial use

- comes with quick and wide height adjustment and high loading capacity

Quick, silent and with wide reach. We could be describing a Big Cat, but these same qualities come with the new Treston Electric Desk TED.

TED goes down as low as 630 mm and all the way up to 1270 mm quickly, at 22 mm per second, giving the user the possibility to easily adjust the table in a range of 64 centimeters. Accommodating a wide range of heights serves especially well in light-duty assembly work and manual packing applications, where the handled items can vary from big to small. A desk with a quick and wide adjustment range helps keep employees work comfortable and ergonomic throughout the workday.

The desk serves also in R&D laboratories as well as industrial offices well, as it withstands high loads of 200 kg, and the desk can be customized with a wide range of accessories. The above- and below-desk accessories - such as swivel arms for screens and document holders, shelves with carton dividers, roll holders, a perforated back panel for tool holders, and lights – further enhance ergonomics, free desk space and provide order, often expected in Lean compliant industrial environments.

Have a look at this product in more detail on the Treston TED web page and ask us for more information.
