

Nilfisk-CFM launch InfiniClean – An Endless Filtration Solution

Nilfisk-CFM have launched InfiniClean, an automatic filter cleaning system predominantly for 24/7 continuous duty applications. The system requires no additional power source or operator involvement making it ideal for the pharmaceutical and food industry amongst other industrial processes.

Clogged filters severely effect vacuum performance, causing expensive downtime and increased service costs. The new InfiniClean solution is an automatic, standalone cartridge cleaning system that simply cleans continually when the vacuum is turned on. Benefits include prolonged filter life, increased operating time and no requirement for additional compressed air systems. The endless filtration system is also very quiet.

The ingenious design works by exploiting the pressure difference between exhaust air and air being sucked into the vacuum to clean the cartridges. M Class cartridges are therefore sequentially and periodically cleaned maintaining the highest possible efficiency and productivity achieving 99.99% filtration at 0.3 micron.

InfiniClean was first devised for the T40 range but has now been launched for the White Line Models VHW320, VHW420 and VHW440, ranging from 1.5 KW to 4 KW.

Nilfisk-CFM are renowned in markets across the world for their range of, mobile or fixed, industrial vacuum solutions. The range comprises over 50 basic models, from 0.5 up to 100 Hp that can be customised in more than 500 variations to solve any problem in the industrial arena. Products include Industrial Vacuums, Pneumatic Conveyors and Centralised Vacuum Systems. Continuous product development and expert, focused sales teams have resulted in Nilfisk-CFM's reputation as one of the leading manufacturers in this field.

Nilfisk-CFM are a division of Nilfisk-Advance, one of the world's largest manufacturers of commercial and industrial cleaning equipment. From Tub Vacuums through to Grounds Maintenance and Road Sweepers Nilfisk-Advance offers a complete and affordable solution to all cleaning challenges.
