

## PRESS RELEASE

30<sup>th</sup> May 2014

### FRAGILE ROOF ACCESS SOLUTIONS FROM SAFESITE

Safesite's range of fragile roof access equipment is ideal for providing short term protection for work on fragile or industrial roofs.

The range includes the Mobile Valley Frame, an extremely compact, portable and easy to assemble system which is completely adjustable for most roof angles, making it ideal for maintenance of valleys and box gutter details on fragile or industrial roofs. The system comprises a lightweight aluminium tubular frame with mesh side panels which are manufactured from high grade aluminium. The cushioned outriggers and safety mesh provide good visibility and safe weight distribution

Other products in Safesite's fragile roof access range include Board-Walk, a portable open mesh walkway and Roof Walk which is a fully guarded rolling work platform. Each product in the range has been specifically designed for use on fragile materials and provides users with safe, easy to assemble working platforms

Falls through fragile roofs, particularly fibre-cement roofs and roof lights are one of biggest causes of serious injuries as a result of falls from height. Safesite's range of fragile roof access solutions helps companies to meet the HSE's requirement that effective precautions be taken for all work on or near fragile surfaces, no matter how short the duration

### HEAD OFFICE

Safesite Limited  
Safesite House  
Priestley Way  
Crawley  
West Sussex  
RH10 9NA

Safesite has a team of qualified engineers and designers who are able to adapt systems to provide a solution to virtually every requirement. The company is owned by the Kee Safety Group, a leading global supplier of fall protection solutions and safety railing systems.
