A World of Knowledge with Rittal CPD Seminars

This November, Rittal will be running its next series of accredited seminars designed to support industry professionals in their Continuing Professional Development (CPD).

The success of the company's CPD programme, which launched last year, has prompted it to be expanded to cover two new topics about enclosures.

Topics explored within the programme now include: the relocation of data centres; their energy efficiency; the application of IEC 61439; enclosure equipment protection; and energy efficient cooling.

The seminars have all been reviewed and assessed by the Chartered Institute of Building Engineers (CIBSE), to ensure the technical content is of a high standard.

All attendees receive a certificate as evidence of their participation.

The seminars are free of charge and include short informative presentations and a workshop:

New for this year - Energy Efficient Cooling

What it covers: an overview of the importance of the adequate provision of appropriate cooling when specifying enclosures. Thermal performance, more than any other element, will form the base line for the design of any enclosure. The seminars cover the need for enclosure cooling; the cost of ignoring overheating; tell-tale signs that an existing enclosure is too hot; methods to establish the enclosure internal temperature; cooling solutions for particular environments; impact of incorrect installation and service and maintenance.

Aimed at: mechanical engineers, facilities managers, estates managers, electrical engineers and IT managers.

New for this year - Enclosures Equipment Protection

What it covers: the considerations needed to ensure the correct and safe specification of industrial enclosures. Providing the right environment for the equipment being installed will deliver the best solution, safety and reliability and the seminar covers an array of topics including what is an enclosure; equipment protection; IP and IK ratings and the effects of modification; security; noise levels; maintenance etc.

Aimed at: mechanical engineers, facilities managers, estates managers, electrical engineers and IT managers.

The remainder of the seminars will reflect last year's successful series and include:

- Building a Data Centre in the Perfect Storm
- An Introduction to the Application of IEC 61439
- Data Centre Energy Efficiency

For further information about all the seminars in Rittal's CPD programme email info@rittal.co.uk or call 01709 704000.

Notes

Rittal, headquartered in Herborn, Hessen, Germany, is a leading global provider of solutions for industrial enclosures, power distribution, climate control and IT infrastructure, as well as software and services.

Systems made by Rittal are deployed across a variety of industrial and IT applications, including vertical sectors such as the transport industry, power generation, mechanical and plant engineering, IT and telecommunications.
